DETAILED ACTION

*** This office action is in response to Applicant's RCE filed 4/11/2005 and Amendment submitted 3/14/05. Claims 1-38 are pending.

Drawings Objection

1. The proposed drawing correction filed June 02, 2003 to add new drawing Figures 4A to 9 are approved by Examiner. However, the annotated term "(added)" must be removed from the added drawing Figures. In order to avoid abandonment of the application, applicant is required to submit Corrected Drawings as Replacement Sheets for the proposed added drawing Figures 4A to 9 submitted on June 02, 2003 without the term "(added)". See 37 CFR 1.121(d)(1). Failure to timely submit the Replacement Sheets will result in the abandonment of the application.

Allowable Subject Matter

2. Claims 1-38 are allowed.

3. The following is a statement of reasons for the indication of allowable subject matter:

Applicant's amendment submitted March 14, 2005 and convincing remarks of record have overcome the rejections. The references including Mazure (5,308,782), Mukai (5,804,848), Colinge (Article), etc., of record, alone or in combination, do not fairly anticipatively disclose each and every aspect of the claimed method for fabricating a transistor, or fairly make a prima facie obvious case of the claimed method as recited in independent claims, which method, for example, of claim 1 comprises vertically forming a body region on the first source/drain region as a fully depleted structure; forming a second source/drain region on the body region to form a column on the substrate, the body region having opposing sidewall surfaces on the column; forming a first gate on a first one of the opposing sidewall surfaces after forming the column, the first gate separated from the first one of the opposing sidewall surfaces by a first oxide layer; and forming a second gate on the second one of the opposing sidewall surfaces after forming the column, the second gate separated from the second one of the opposing sidewall surfaces by a second oxide layer, wherein vertically forming the body region includes vertically growing an

epitaxial layer such that the body region is formed having a width and a doping concentration such that a threshold voltage is substantially independent of bulk charge in the body region in transistor operation.
